

Automation testing

Day-02 Assignment

Get the input from user and perform arithmetic operations (Add,Sub,Mul and Div):

The code for above are given in below:

The screenshot displays the Eclipse IDE interface. The Project Explorer on the left shows a project named 'CoreJavaBasics' with a source folder 'src' containing several Java files, including 'ArithmeticOperation.java'. The main editor window shows the code for 'ArithmeticOperation.java', which is a Java class with a static 'main' method. The code uses 'Scanner' to take user input for two integers, 'a' and 'b', and then performs addition, subtraction, multiplication, and division, printing the results. The Console window at the bottom shows the execution output, indicating that the program ran successfully and produced the expected results for the given inputs (30 and 10).

```
1 package corejava;
2 import java.util.Scanner;
3 public class ArithmeticOperation {
4     public static void main(String[] args) {
5         Scanner inp = new Scanner(System.in);
6         System.out.println("Enter the A vale :");
7         int a = inp.nextInt();
8         System.out.println("Enter the B vale :");
9         int b = inp.nextInt();
10        inp.close();
11        System.out.println("Addition : " +(a+b));
12        System.out.println("Subraction : " +(a-b));
13        System.out.println("Multiplication : " +(a*b));
14        System.out.println("Division : " +(a/b));
15    }
16 }
17 }
```

Console Output:

```
<terminated> ArithmeticOperation [Java Application] C:\Program Files\Java\jdk-22\bin\javaw.exe (6 Aug 2026, 6:34:46 pm - 6:34:53 pm elapsed 0:00:07) [pid: 163764]
Enter the A vale :
30
Enter the B vale :
10
Addition :40
Subraction :20
Multiplication :300
Division :3
```
