

Automation testing

Day-05 Assignment

Create a Parent Class Animal and Create a Child Class Cat.

Animal should have methods like sound(),sleep(),walk()

Cat should inherit the Animal class and access the methods sound(),sleep() and walk() :

The screenshot shows the Eclipse IDE interface. The Project Explorer on the left displays a project named 'CoreJavaBasic' with a source folder 'src' containing several Java files, including 'CatInheritance.java'. The main editor window shows the code for 'CatInheritance.java'. The code defines a package 'corejava', a base class 'animal' with methods 'sound()', 'sleep()', and 'walk()', and a child class 'CatInheritance' that extends 'animal' and implements a 'run()' method. A 'main' method is also present, which creates an instance of 'CatInheritance' and calls its methods. The Console window at the bottom shows the output of the program: 'Sound', 'Sleep', 'Walk', and 'Run'.

```
1 package corejava;
2 class animal{
3     void sound() {
4         System.out.println("Sound");
5     }
6     void sleep() {
7         System.out.println("Sleep");
8     }
9     void walk() {
10        System.out.println("Walk");
11    }
12 }
13 public class CatInheritance extends animal{
14     void ran() {
15         System.out.println("Run");
16     }
17 }
18 public static void main(String[] args) {
19     // TODO Auto-generated method stub
20     CatInheritance c = new CatInheritance();
21     c.sound();
22     c.sleep();
23     c.walk();
24     c.ran();
25 }
```

Console Output:

```
<terminated> CatInheritance [Java Application] C:\Program Files\Java\jdk-22\bin\javaw.exe (12 Aug 2026, 9:11:15 pm - 9:11:15 pm elapsed 0:00:00) [pid: 22556]
Sound
Sleep
Walk
Run
```
