

Automation testing

Day-04 Assignment

1. Print the numbers from 1 to 50 which are divisible by 5 using looping statement and display the output

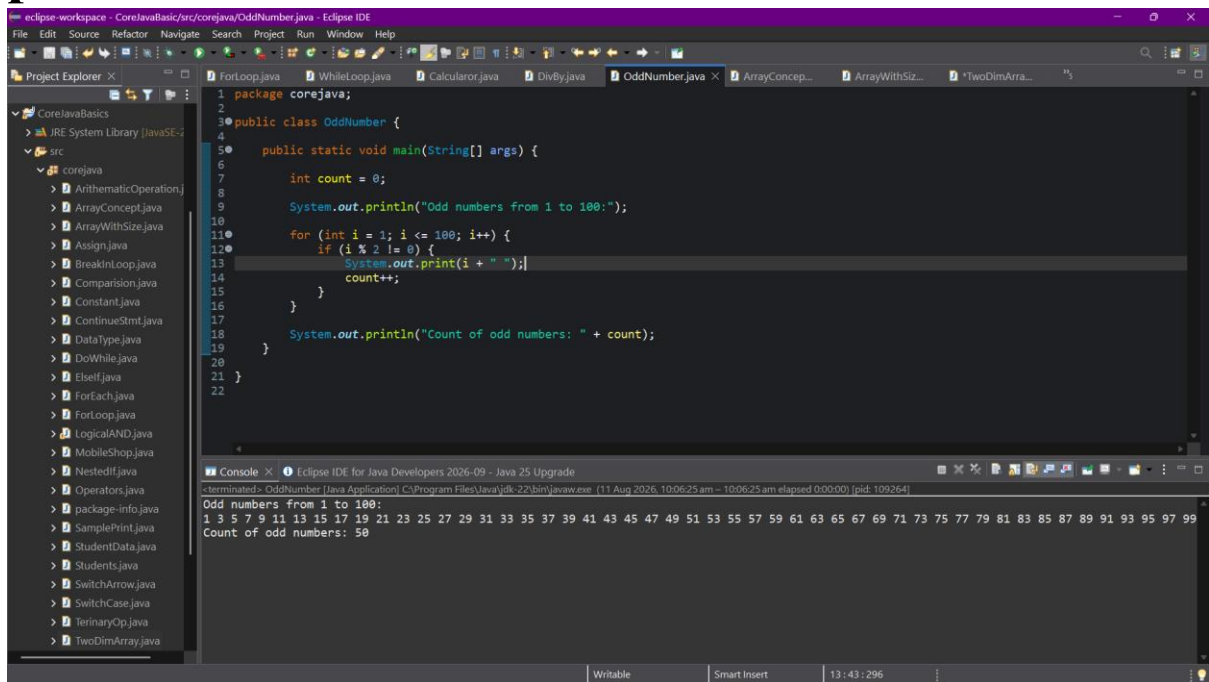

The screenshot shows the Eclipse IDE interface. The Project Explorer on the left displays a project named 'CoreJavaBasics' with a package 'corejava' containing several files, including 'DivBy.java'. The main editor window shows the code for 'DivBy.java':

```
1 package corejava;
2
3 public class DivBy {
4
5     public static void main(String[] args) {
6         // TODO: Auto-generated method stub
7         int i = 1;
8         for(i=1; i<=50; i++) {
9             if(i%5==0) {
10                System.out.println(i);
11            }
12        }
13    }
14 }
15
```

The Console window at the bottom shows the output of the program, displaying the numbers 5, 10, 15, 20, 25, 30, 35, 40, 45, and 50, each on a new line.

Count the odd numbers between 1 to 100 and print

The screenshot shows the Eclipse IDE interface. The Project Explorer on the left displays a project named 'CoreJavaBasics' with a package 'corejava' containing various Java files. The main editor window shows the 'OddNumber.java' file with the following code:

```
1 package corejava;
2
3 public class OddNumber {
4
5     public static void main(String[] args) {
6
7         int count = 0;
8
9         System.out.println("Odd numbers from 1 to 100:");
10
11         for (int i = 1; i <= 100; i++) {
12             if (i % 2 != 0) {
13                 System.out.print(i + " ");
14                 count++;
15             }
16         }
17
18         System.out.println("Count of odd numbers: " + count);
19     }
20 }
21
22 }
```

The Console window at the bottom shows the output of the program:

```
Odd numbers from 1 to 100:
1 3 5 7 9 11 13 15 17 19 21 23 25 27 29 31 33 35 37 39 41 43 45 47 49 51 53 55 57 59 61 63 65 67 69 71 73 75 77 79 81 83 85 87 89 91 93 95 97 99
Count of odd numbers: 50
```
