

Automation testing

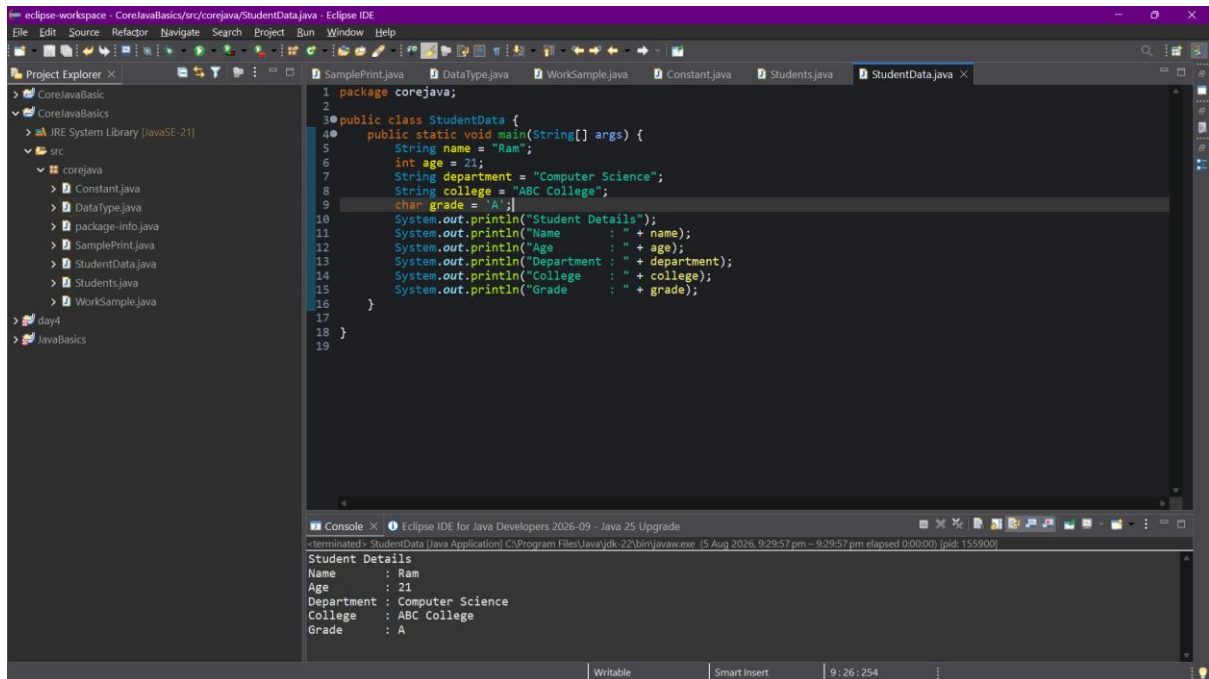

Day-01 Assignment

The advantages of Java:

- Platform Independent – Java programs run on any operating system using the Java Virtual Machine (JVM).
- Simple and Easy to Learn – Java has an easy syntax and is beginner-friendly.
- Object-Oriented – Supports classes and objects, making code reusable and organized.
- Secure – Provides built-in security features to protect applications and data.
- Robust (Reliable) – Uses exception handling and automatic memory management to reduce errors.
- Automatic Garbage Collection – Removes unused memory automatically, improving performance.
- Multithreading – Allows multiple tasks to run at the same time, making applications faster.
- High Performance – Uses the Just-In-Time (JIT) Compiler for faster program execution.
- Portable – Java applications can run on different devices and operating systems without modification.

- Rich Standard Library – Provides many built-in classes and packages for easy development.

Write a program to print Student details

The screenshot shows the Eclipse IDE with a project named 'CoreJavaBasics'. The 'Project Explorer' on the left shows the project structure, including a package 'corejava' with files 'Constant.java', 'DataType.java', 'SamplePrint.java', 'StudentData.java', 'Students.java', and 'WorkSample.java'. The 'Main' window displays the code for 'StudentData.java'.

```
1 package corejava;
2
3 public class StudentData {
4     public static void main(String[] args) {
5         String name = "Ram";
6         int age = 21;
7         String department = "Computer Science";
8         String college = "ABC College";
9         char grade = 'A';
10        System.out.println("Student Details");
11        System.out.println("Name      : " + name);
12        System.out.println("Age       : " + age);
13        System.out.println("Department : " + department);
14        System.out.println("College   : " + college);
15        System.out.println("Grade    : " + grade);
16    }
17 }
18 }
19 }
```

The 'Console' window at the bottom shows the output of the program:

```
Student Details
Name      : Ram
Age       : 21
Department : Computer Science
College   : ABC College
Grade    : A
```
